

The Center for Alaskan Coastal Studies

presents a journey into
the world of sea ducks
with a NEW hands-on
Activity Guide
for 4-6th graders

A sample packet includes:
▷ Background Information,
▷ Table of Contents and
▷ Sea Duck Adaptations
(an activity from the Guide)

This hands-on activity guide offers activities that explore the unique adaptations of sea ducks and their role in the marine and fresh water food webs; provides an opportunity to research one of the 15 species found in Alaska and looks at some of the conservation issues surrounding the health of the sea duck populations in Alaska. A set of 8 species identification cards are included for help with your class research projects and a set of 12 "Sea Duck Trading Cards" are included with the supplement. These cards will be useful for quick identification of waterfowl.

A Teaching Kit will be available in the Fall of 2003 for use with the activity guide. Included in this dynamic kit are the materials for completing activities, a class set of high quality student binoculars, models of some of the sea ducks, books and resources to help your students learn more about sea ducks and a power point presentation you can share with your class.

Also available is a Sea Duck Traveling Display which can be set up at your school or organization for use with your sea duck educational efforts.
